

LANL Technical Security

Pro2Serve's premier security system expertise led to its selection by LANS LLC to lead the technical security effort at LANL. Assignment of Pro2Serve to the LANS Team was recognized as a strength by the LANL Source Evaluation Board Chair and the Source Selection Authority. Through this contract Pro2Serve is responsible for all aspects of technical security at the Laboratory. The recently revised Department of Energy Design Basis Threat (DBT) represents a significant challenge, requiring a fundamental change in the security posture at the Laboratory. As a comprehensive plan is being designed to guide LANL's long-term strategy for meeting this challenge, Pro2Serve is responsible for security systems that enable intelligent assessment and rapid response to security and safeguards situations. As security systems are replaced or modified, each must be fully integrated into the overall security environment with minimal negative impact to our primary missions.

Pro2Serve provides personnel with the expertise required to manage and support the design, installation, and maintenance of LANL physical security systems. Systems supported include, but not limited to, intrusion alarms, alarm monitoring systems, and automated access control systems. General support activities include as examples, preparation of cost estimates, Title I, II and III design packages, engineering drawings, procurement specifications,

acceptance test plans and procedures, engineering change requests, and direct engineering support for installation and maintenance activities on supported systems and facilities.

Additional support activities may include NNSA/LANL requirement interpretation for application of physical security systems; participation in vulnerability analyses; assessment of new technology for applicability for deployment, participation in the Argus community for technology integration and information exchange; integration of new technology into security systems; and conduct and maintenance of in-house training programs and certifications.

Through this contract, Pro2Serve is responsible for ongoing operation and maintenance of the Argus security system previously designed by Pro2Serve and upgrades to the system, as well as support for other legacy security systems that remain in operation.
